Garner Lab: Virginia College of Osteopathic Medicine (VCOM)
Blacksburg, VA

Part-time position from November 13, 2017 – June, 2018

The Garner Lab at VCOM is actively seeking a programmer to contribute to research in the field of human ethnic variation. Specifically, we are interested in understanding how genomic “dark matter” contributes to ethnicity. Possibly contributions include development of an online interactive data explorer to increase the visibility of our current datasets (javascript, css, php, mysql). Assistance with bioinformatics research such as protein and structure analysis (R, linux, C). We are also considering projects that take advantage of data visualization in VR (oculus/vive). Guaranteed co-authorship on a publication.

Applicants can send resumes to nak3c@vt.edu
