Full-Stack Developer
Location: Washington, DC

➔ Do you want to work to solve big problems with great people?
➔ Do you want to change the way media is consumed?
➔ Do you want to question norms?
➔ Do you want to deploy solutions to production hourly?

ICX Media is a product and technology startup that is building success for content creators through imaginative use of data and technology. We are building our product for digital content creators (filmmakers, directors, producers) to help their growing need to find the right audience, understand that audience, and monetize their creations in the best way possible.

We are using data, analytics and machine learning to create a visually brilliant application for independent content creators. To pull this off we will be using tools such as Clojure, Spark, Cassandra and AngularJS to allow us to solve problems quickly and push traditional development boundaries. In addition to full-time employees, we are always interested in opening our doors to December interns and filling out our 2016 hiring roster.
