

Jr. Software Developer Analyst 1- Java, Oracle, JavaScript

United States-Bolling-Washington DC

US Citizenship Required for this Position

Yes

Relocation Assistance

Negotiable

Description

FEDITC is evaluating candidates for a range of internship and direct hire opportunities in the greater DC area. The ideal candidate will be a self-starter who enjoys working in a team environment. Applicants with a range of technical skills preferred (Developers with Systems Administration / Documentation Skills). The ideal applicant will have either professional or personal experience with JAVA, Oracle 10g and JavaScript libraries such as ExtJS, Sencha, or JQuery. Duties will include: maintaining current code base, developing new modules for a currently deployed system, and assisting with supporting documentation and help desk maintenance of fielded system. The candidate must be eligible for a security clearance, as denial will result in termination. Relocation to the local area for the term of the internship will be required.

FEDITC is an 8a/HUBZONE company supporting the Department of Defense (DoD) and various agencies worldwide. We are a fast growing company focused on developing the skills and opportunities available to our employees while delivering quality services to our clients. We are a partner of Northrop Grumman, Booz-Allen Hamilton, Lockheed Martin, and Microsoft on various projects throughout the DoD community.

Responsibilities

Roles and Responsibilities:

- Primary responsibilities focus on new full life cycle software development and maintenance of a multi-user client-server computer system recently extended to incorporate a multi-tier J2EE service-oriented architecture providing various web services.
- Immediate responsibilities will include enhancing and maintaining the existing systems as well as design, development, documentation and development of new applications and sub-systems.
- You will be responsible for performing requirements analysis, design, coding, unit and integration testing of software, and personal configuration management. Candidate will be responsible for development of software design documentation and test scenarios and will be expected to participate on software peer reviews.

Qualifications

Minimum Qualifications:

To be considered for this position, you must minimally meet the knowledge, skills, and abilities listed below:

- **Bachelors Degree in Computer Science, or Mathematics, or Technical science (e.g. Engineering) in progress plus 1+ years experience in a technical field (Lab Technician / Systems Administration acceptable)**
- Knowledge of relational database concepts (i.e. ERDs) and experience programming.
- Must enjoy working in a team environment with frequent customer contact and have excellent oral communication and interpersonal skills.
- Demonstrated skills in solving problems and responsibility for ensuring customer satisfaction.
- Must be able to obtain a Security Clearance.
- U.S. Citizenship required.

Preferred Qualifications:

Candidates with these desired skills will be given preferential consideration:

- **Candidates with 1-2 years exp in one or more of the following are preferred: Web services, and Oracle database technologies. SQL, Java, JavaScript, ExtJS(Sencha), JQuery, Oracle DBMS.**

Please include current GPA, college transcripts, additional relevant experience (including hobbyist or other personal activities), and any work experience.

New Bachelors Degree or Master Degree College Grads are encouraged to apply.
