

Software Engineer I

Job Description

Whether providing web-delivered solutions, custom software, or bioinformatics solutions for our clients, we seek to streamline the way the work of life science gets done, helping to speed the answers to the questions of tomorrow. We're hiring creative thinkers in software development and bioinformatics who want to help us get there.

The Software Engineer Job

5AM's primary mission is to build software solutions for our clients. At 5AM, software engineers build those software solutions. You must possess skills across various software disciplines such as analysis and design, implementation, and test, as well as universal disciplines such as communication and mentoring.

Do you want your work to make a difference in people's lives? We are a group of smart people, offering a chance to make change for our clients and the people they serve. You'll learn, teach, and grow. Review our web site for details on applying.

Requirements

We are looking for candidates who have a passion for building quality software right the first time. A minimum 3+ years application development experience using J2EE. Be proficient or have at least a working knowledge of various technologies we use in our applications (training will be provided on tools where necessary), including the below

- * Java 1.5
- * JSP 2.x
- * Struts 2.x
- * EJB 3.x
- * Hibernate 3.x
- * JBoss 4.x
- * MySQL 5.x
- * Eclipse, Subversion
- * An understanding of UML
- * 3-tier architecture and design, object oriented programming techniques
- * Excellent analytical/problem solving, organizational, and time management skills
- * Strong written and verbal communication skills to explain ideas to both management and technical audiences

Responsibilities

You will be responsible for implementing various parts of a complex web-based J2EE applications. Work in a team-oriented iterative Scrum development process. Collaborate and work across many teams. Since we serve the life science sector, knowledge of bioinformatics, genomics and/or proteomics are a plus but not required. You will:

- * Participate in the design of the web application
- * Understand software requirements
- * Understand and participate in the Scrum process
- * Implement various parts of the application using Java
- * Formulate and implement recommendations/solutions

ABOUT THE COMPANY

5AM Solutions works to make the web the place where life science professionals work, collaborate, and succeed. We work with researchers, doctors and clinicians, and leaders in the academic, commercial, government, nonprofit, hospital, research, and pharmaceutical worlds - people who work to improve human health. Our clients use 5AM's solutions to find answers in data, work more efficiently, collaborate for results. We offer:

- * Science and analysis services
- * Software development services
- * Product solutions

GREAT BENEFITS

- * Voted "Best Place to Work" by Washingtonian and Washington Business Journal
- * Flexible work hours, paid time off, health, vision, and dental coverage, employer matching retirement, hardware, ownership.
