Software Development Engineer – Kindle

Job Description

The Digital Content Delivery Platform team is looking for a highly motivated Software Engineer to work on our back-end services for Kindle, one of the most innovative businesses at Amazon. You will get the opportunity to own major deliverables end-to-end, work closely with other teams and scale our services as the business grows. This is a high visibility team where you will get a chance to make positive impact on customer experience.

Job Qualifications:

- Strong background in Algorithms, Data Structures, Java and SQL.
- Excellent design skills.
- Experience building highly scalable applications.
- Excellent verbal and written communication skills, including with non-technical co-workers.
- Scripting experience is a plus (Perl, Python or Ruby).
- A BS/MS in computer science or a relevant area is required.

Basic Qualifications

- Bachelor's Degree in Computer Science or related field, or 4+ year relevant work experience
- 2+ years professional experience in software development
- Computer Science fundamentals in object-oriented design
- Computer Science fundamentals in data structures
- Computer Science fundamentals in algorithm design, problem solving, and complexity analysis
- Proficiency in, at least, one modern programming language such as C, C++ and Java

Preferred Qualifications

- Masters or PhD in Computer Science
- Strong written and verbal communication skills preferred
