

Systems Administrator/Integrator

Northrop Grumman Electronic Systems is seeking experienced candidates to install, configure and integrate software systems. The installation and integration of software that has previously operated in isolation provides challenges at a technical level when trying to integrate these systems. For example, Vendor A has submitted a WebLogic enterprise application. Vendor B has done the same. These all work well on their own WebLogic instance but, when co-deployed, have undesirable interactions. The ability to determine whether the issues are in the software or in the WebLogic configuration will be required. The candidate's ability to troubleshoot these types of issues is complicated further due to the requirement of replicating the installation process. Therefore attention to detail and thorough documentation is a key ingredient to the overall success of the program.

Qualifications:

TS/SCI; candidates with a Secret clearance and ability to get an SCI in a timely manner will be considered.

Bachelor's degree with 3+ yrs of experience.

System administration skills of Solaris, Linux, and/or Windows platforms.

Experience deploying enterprise application on WebLogic, WebSphere, and JBoss, including configuration experience with these servers.

Ability to write basic scripts using shell scripting or Perl.

Experience with Microsoft Active Directory.

Candidate must excel at troubleshooting and solving hard problems; must have system administration skills with methodical debugging techniques and the ability to troubleshoot issues with good engineering rigor. This position is *not* a software development position. Position requires the ability to be flexible, and operate in a dynamic, fast-paced, team-oriented environment. Good communication skills and trouble shooting skills are also required.

Preferred Qualifications:

Experience with VMware ESX server, Lab Manager, Virtual Infrastructure Client.

Ability to troubleshoot HTML, JSP, JavaScript, and Web Service application.

Ability to troubleshoot applications written in Java, C, C++, Visual Basic, and other languages.

Familiarity with Oracle, Sybase, MySQL, Microsoft SQL Server.

Experience with SNMP, NFS, SMB, DHCP, DNS.
