

Java Web Developer (Telecommute)

Fast Lane Software LLC is a leading transportation software consulting company that provides custom web-based solutions. We specialize in **user interfaces, GIS applications, web-services,** and **working with Bluetooth devices.** We anticipate **Android application development** in the near future.

We are currently seeking an **entry to mid-level Java developer** with a **minimum of 1 year of experience in Java.** Applicants must have a **solid understanding of object oriented design and web development** including experience writing **Java Servlets** to produce dynamic content and should have an understanding of **REST web services** and **AJAX.** **GIS experience** (Google Maps or ESRI APIs) is a major plus. Experience with **Adobe Flex** is also a plus.

We will consider full-time or part-time employees. Internships are also a possibility for the right candidate.

This position is primarily remote location based (work from home). However, it may require work at client locations in the Baltimore/Washington D.C. metropolitan area, particularly in the short term.

This is an excellent opportunity for a **motivated developer** who wants to learn the software consulting trade and be an integral part of a **dynamic growing company.**

U.S. citizenship is required.
