Associate Developer (2011-2012 Grads)

Engineering - Software Development | Washington, DC, United States

We live hungry, code happy and build products that surprise and delight every day.

As a member of our engineering team, you will work in a fun and booming environment creating innovative products that reach millions of users every day. You'll be on a team of Mac loving, denim-wearing individuals who are passionate about what they do. Not just anyone can say that they've worked with Ruby Guru Chad Fowler – but you could.

Candidate Profile:

- Are you hungry (no, not for pizza, but to build awesome code)?
- Do you breeze through your coursework so that you have more time to spend dreaming up and developing your own applications?
- Did your professors teach you Java and C++, but you were bored so you decided to pick up a Ruby book and tinker around?
- Have you built applications you are proud of and want to tell your friends about?
- Are you getting chills reading this job description?

LivingSocial is seeking junior-level developers who have a thing for open source technologies and building memorable web experiences. We need someone who isn't afraid to roll up their sleeves and get dirty with SQL – a true code slinger who can get Rails/HTML/CSS/JS to bend at his or her will.

For fans of Objective C, Cocoa, Java, iPhone SDK, Android SDK, we have mobile stuff too. We are looking for savvy mobile app developers who are knowledgeable of the nuances of each platform and can tailor mobile experiences to match.

Preference will be given to applicants with:

- A background in Computer Science, Engineering, or equivalent
- Applied experience beyond coursework in web development or mobile app development (Don't worry if you don't have paid work experience – we value personal initiative!)
- Demonstrable proficiency with three or more of the following:
 - Ruby, Java, C/C++, Rails/HTML/CSS/JS
 - Objective C, Cocoa, iPhone SDK, Android SDK
 - SQL

Please include the following in your cover letter:

- Which languages are you most proficient in?

- Tell us About **or** Provide a Link to any coding/software projects you have worked on that was not a class assignment.
- If you could create any type of product, what would it be? Why?

Perks:

Top-of-the-line Apple hardware. We even have a few Apple Trackpads lying around.

All the usual stuff (health/dental/401k/etc) so you don't have to worry about self or family.

A kitchen full of sodas and snacks.

LivingSocial appreciates your interest in our company as a place of employment. It is the policy of LivingSocial to provide equal opportunity for employment to all qualified employees and applicants, regardless of race, religion, religious affiliation, ancestry, citizenship status, marital status, familial status, sexual orientation, color, creed, national origin, sex, age, disability, or veteran status. This policy applies to all areas of employment including recruitment, placement, training, transfer, promotion, termination, pay, and other forms of compensation and benefits. The company will comply with its legal obligation to provide reasonable accommodations to qualified individuals with disabilities.
