

Position: Web Developer

Company: Status Solutions LLC.

www.statussolutions.com

Status Solutions is the leading provider of innovative situational awareness solutions. Our mission is to keep people informed by delivering tools for life safety assurance, security monitoring, environmental awareness and mass notification. With Status Solutions' unique applications, key individuals, personnel groups or entire populations can be made aware of any situation occurring in a facility. Customers rely on us to help them save lives and property, prevent loss of convenience, and protect business continuity.

We are seeking a full time software developer to assist in the continued development of the web delivered components of our products. The existing web interfaces uses the Windows, Apache, MySQL, and PHP (WAMP) stack with some use of jQuery UI elements. Other technology components will be considered and evaluated moving forward. Candidate must be passionate about web based technologies and be able to work independently in a fast paced, distributed environment. Remote work is a possibility, but preference will be given to candidates who can meet weekly with existing staff during the first several months of employment.

Qualifications:

- Ability and willingness to support existing PHP based web interface
- Familiarity with SQL
- Ability to eventually take full responsibility for our web delivered components
- Strong communication skills and readiness to work within a team environment

Benefits:

- 401K and profit sharing available
- Medical, dental and vision benefits eligibility
- Paid time off and holiday pay included
