

Mobile Developer Wanted

Graduating soon? Love to code?

WillowTree Apps in Charlottesville, VA builds apps for Android, iPhone, Blackberry, Windows Phone 7 and the Mobile Web. If you are a computer science or engineering major who's ready to dive head-first into mobile, we want to meet you.

Come join the developer-centric team at WillowTree Apps. We use GitHub, scrum stand-ups, and hang out on freenode (svn users are welcome, but we will convert you). We are very client-driven, but we are also working on internal product development with weekly R&D check ins.

We build native apps and games for everyone from small start-ups to the Game Show Network to the Philadelphia Eagles to Johnson & Johnson. We also use Python and Ruby (but mostly Python) on our back-end services. You must work in Charlottesville VA.

So why do you need to come here:

- Enjoy a fun, learning environment - we are constantly pushing the bounds of mobile technology and we have a good time doing it
- Want to be part of a tight-knit team - you are not employee # 35,000 but will actually matter!
- Have A Great Starting Salary & Benefits - a real salary, healthcare, vacation, stock-options (yes, you will potentially own shares in a growing company)!
- Continue To Learn - we support continued learning and support our team to explore new ideas and concepts.

Contact us now at jobs@willowtreeapps.com and tell us more about you, why you need to be working on apps and at the coolest company in Virginia. Also, we certainly love to see examples of code so, if you are up for it, dazzle us with some of your proudest work as well.
