Booz Allen is committed to delivering results that endure. We are proud of our diverse environment, EOE, M/F/Disability/Vet.

Key Role:
Conduct systems analysis and programming activities related to the development, maintenance, and installation of computer programs to support internal business operations. Apply basic principles, theories, and concepts to job assignments. Work on closely managed Problem-solving tasks and follow standardized practices and procedures. Interface with supervisors, managers, and other professionals in work groups. Provide software development expertise for an end-to-end dataflow system based on the framework and customer requirements. Design, implement, develop, and deploy software systems, including configuration management, systems configuration, and testing. Assist with creating tests for newly developed code and be highly involved in development core functionality of existing systems.

Basic Qualifications:
- 1+ years of experience programming in multiple languages, including HTML, CSS, JavaScript, AJAX, PHP, ColdFusion, and/or Java.
- 1+ years of experience working with database platforms (Oracle, SQL Server, etc.).
- Experience implementing and using MVC frameworks.
- Active SECRET security clearance.
- Possession of excellent oral and written communication skills.
- BA or BS Degree in Business Information Technology, Computer Science, Computer Engineering, or similar.

Additional Qualifications:
- Understanding of web services (serialized data using XML, JSON, etc.) and authentication mechanisms.
- Understanding of Agile SCRUM development techniques and processes.
- Active or in progress CompTIA Security+ certification.

Clearance:
Applicants selected will be subject to a security investigation and will need to meet eligibility requirements for access to sensitive government information, systems, and facilities; SECRET security clearance is required.
