Commodity Weather Group, LLC is looking to add a skilled Developer to our information technology team in our Washington, DC area office to help build our thriving and growing business.

Key Qualifications:
- familiarity with a web hosting environment and/or supporting a development environment
- background setting up and maintaining Linux, Apache, MySQL, PHP (LAMP) stacks
- self-motivated individual with a strong desire to develop innovative techniques
- creative, positive-minded, able to collaborate in team environment
- exposure to a demanding customer service environment is a plus

Responsibilities:
- architect, deploy, and maintain a multi-tiered server infrastructure for the testing and deployment of a Drupal-based website
- perform Drupal site maintenance tasks, such as upgrades and data migration
- serve as primary point of contact to support Drupal issues/ questions/additions within the office

Please contact us if you are qualified for this unique opportunity and believe we have described you above. Candidates must have either advanced computer programming coursework (beyond minimum academic requirements) or significant extracurricular programming experience. Most importantly, applicants should have an ambition to be an integral member of a dynamic team that is focused on building unique value-added weather products.

Resumes should include GPA or an unofficial transcript if a graduate within the past 3 years. In addition, please submit a brief paragraph describing how you fit the profile above and will add value to our firm.

CWG offers employees a comprehensive compensation and benefits package, including:
- fully company-funded health, dental, vision, and life insurance
- 401(k) plan with company match
- flexible work schedules and generous leave policies
- bonus opportunities
- transportation subsidies
