Software Developers: Intern/Part/Full available

We are currently seeking to hire a highly motivated, creative thinker to join our team as a software developer. The position is primarily an embedded development position, but duties will cover the full range of the development life-cycle from requirements to integration testing. The position will work directly with our highly experienced staff on a newer military weapon system.

Fleming Technologies is a great place to demonstrate and grow your technical skills in a hands-on environment.

Education:
Bachelors, or higher, in Computer Engineering, Computer Science, or equivalent
-or-
Progress towards a B.S. degree or higher in the above fields
-or-
Previous experience in embedded software development

Required skills:
Proficiency in C, C++, or equivalent
Works independently and demonstrates initiative
Strong technical skills including an understanding of software development principles
US citizenship is a firm requirement

Desired experience:
Mission/Safety critical systems
Hardware/Software integration
C# - Winforms
Technical writing for software
Defect Tracking
Revision Control systems
FPGA Development

Compensation and benefits:
Hourly rates - dependent on experience
Casual work environment
Intern benefits: Paid vacation
Part/Full benefits: Paid vacation, 408k
