Space Systems Integration (SSI), an aerospace consulting company in Chantilly, Virginia, is looking for a student with C++ programming skills who could help in the development of a technical software application. Any exposure to Amazon Web Services would also be a plus, as we’d eventually like to deploy this application throughout our company, but really, we are just looking for people who can take algorithms and requirements and turn them into solid C++ code. This job will require both self-paced coding and interaction with SSI engineers; as a result, we’d prefer if you lived in Northern Virginia or close enough so that you could meet with SSI personnel on a weekly basis.

If interested, please email your questions and/or resume to Chris Costello at chris.costello@spacint.com.
